A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex, they are often developed using formal design and modeling techniques. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.
Web agents—people or software acting on this information space Linked Data Evolving the Web into a Global Data Space Chapter 2 Principles of Linked Data The term Linked Data refers to a set of best practices for publishing and interlinking structured data on the Web. These best practices were introduced by Tim Berners Lee in his Web architecture note Linked Data and have become known as the Linked Data principles. These principles are the following:
