authors with extra insight into the journals and help them in their journal selection process when submitting an article for publication Cardiac tamponade Wikipedia Initial diagnosis can be challenging as there are a number of differential diagnoses including tension pneumothorax and acute heart failure citation needed In a person with trauma presenting with PEA pulseless electrical activity in the absence of hypovolemia and tension pneumothorax the most likely diagnosis is cardiac tamponade Signs of classical cardiac tamponade include three Hospitals Clinics amp Doctors in IL UChicago Medicine Close hero overlay Bringing Research to Reality At UChicago Medicine we’re advancing the forefront of health every day Our physicians are shaping modern medicine with innovative discoveries – just as they have since our founding nearly 100 years ago Postoperative fever UpToDate INTRODUCTION Fever above 38ºC 100 4ºF is common in the first few days after major surgery Most early postoperative fever is caused by the inflammatory stimulus of surgery and resolves spontaneously However postoperative fever can be a manifestation of a serious complication The Journal of Thoracic and Cardiovascular Surgery Home Page The American Association for Thoracic Surgery is an international organization of over 1 300 of the world’s foremost cardiothoracic surgeons representing 41 countries Founded in 1917 its members have a proven record of distinction within the specialty and have made significant contributions to the care and treatment of cardiothoracic disease throughout the world UpToDate Learn how UpToDate can help you Select the option that best describes you Cigna Medical Coverage Policies – Radiology Oncology Imaging Imaging Oncology Imaging Oncology Imaging Oncology Imaging Oncology Imaging ONC 1 1 Key Principles Age of Individual Appropriate Imaging Guidelines ? 18 years old at initial diagnosis Adult Oncology Imaging Guidelines It 18 years old at initial diagnosis Pediatric Oncology Imaging PS3 16 DICOM Standard Table of Contents Notice and Disclaimer Foreword 1 Scope and Field of Application 2 Normative References 3 Definitions 4 Symbols and Abbreviations Chronic Fatigue Syndrome Medical Clinical Policy Number 0369 Policy Aetna considers the following as medically necessary exclusionary tests to be used for the evaluation of members suspected of having chronic fatigue syndrome CFS as recommended by the National Institutes of Health eGFR using CKD EPI Calculate by QxMD Calculate is a next generation clinical calculator and decision support tool freely available to the medical community To date it contains 250 medical calculators in all manner of specialties Fentanyl Induced Chest Wall Rigidity in the Intensive Care Journal Clinical Anesthesiology and Pain Medicine 9 Re e P www scientonline org J Clin Anesth Pain Med Case report Fentanyl Induced Chest Wall Rigidity in the Intensive Care Unit Imrana Malik1 Jonathan A Wilks2 Paramveer Singh3 and Ninotchka Brydges4 1Associate Professor of Medicine Department of Critical Care Unit 0112 The University of Texas MD Pulmonary atresia with ventricular septal defect Pulmonary atresia with ventricular septal defect Systematic review Duraisamy Balaguru 1 Muhammad Dilawar 2 1 Assistant Professor of Pediatrics Tufts University School of Medicine Boston MA USA 2 Consultant Pediatric Cardiologist Cardiology amp Cardiovascular Surgery Dept Hamad Medical Corporation amp Assistant professor of Pediatrics Weil Cornell Medical College Doha Qatar Magnetic Resonance Angiography MRA and Magnetic Karagiorgas GP Brotsis AG Giannis T et al The diagnostic accuracy of magnetic resonance angiography for blunt vertebral artery injury detection in trauma patients A systematic review and meta analysis A Comprehensive Newborn Exam Part I General Head and A comprehensive newborn examination involves a systematic inspection A Ballard score uses physical and neurologic characteristics to assess gestational age Craniosynostosis is caused by No British Journal of Medical Practitioners Classification and Clinical Features POTS is a heterogeneous group of disorders resulting in a common clinical scenario This syndrome is classified as being either primary or secondary Antibiotic Therapy for Positive Blood Cultures INTRODUCTION The
appropriate selection of empiric antibiotic therapy for positive blood cultures is a complex and difficult decision. Bacteria are only partially identified on Gram stain and speciation and susceptibility results will take an additional 24-48 hours after a culture is reported as positive. While patients with positive blood cultures may be bacteremic, signifying a true Systemic Lupus Erythematosus (SLE). Practice Essentials. Systemic lupus erythematosus (SLE) is a chronic inflammatory disease that has protean manifestations and follows a relapsing and remitting course. More than 90% of cases of SLE occur in women frequently starting at childbearing age.
