1. Introduction. In industrial and engineering applications, the use of granular materials such as powders, seeds, and soils is unavoidable. Therefore, further studies and improvements are currently needed to optimize and facilitate the process of handling and manufacturing bulk granular materials. The Hoek–Brown failure criterion and GSI – 2018 edition The Hoek–Brown criterion was introduced in 1980 to provide input for the design of underground excavations in rock. The criterion now incorporates both intact rock and discontinuities such as joints characterized by the geological strength index GSI into a system designed to estimate the mechanical behaviour of typical rock masses encountered in tunnels, slopes and foundations.
