Medical ethics is a system of moral principles that apply values to the practice of clinical medicine and in scientific research. Medical ethics is based on a set of values that professionals can refer to in the case of any confusion or conflict. These values include the respect for autonomy, non-maleficence, beneficence, and justice. Such tenets may allow doctors, care providers, and families to make decisions that are in the best interest of the patient.

Many of the prisoners subjected to isolation which can extend for years have serious mental illness, and the conditions of solitary confinement can exacerbate their symptoms or provoke recurrence. Prison rules for isolated prisoners, however, greatly exceed the Bioethics. Bioethics is the study of the ethical issues emerging from advances in biology and medicine.
