INTRODUCTION — Early identification and treatment of pulmonary hypertension PH is generally suggested because advanced disease may be less responsive to therapy. 

Treatment begins with a baseline assessment of disease severity followed by primary therapy Primary therapy is directed at the underlying cause of the PH. 

Symptoms causes and treatment Pulmonary hypertension is high blood pressure in the blood vessels of the lungs. The complications can be serious including right-sided heart failure and coughing up blood but treatment is necessary. 

Therapy for Pulmonary Arterial Hypertension in Adults 
Background Pulmonary arterial hypertension PAH carries a poor prognosis if not promptly diagnosed and appropriately treated. The development and approval of 14 medications over the last several decades have led to a rapidly evolving approach to therapy and have necessitated periodic updating of evidence-based treatment guidelines.
