the debit side of the cash book and departmental columns in the sales book and in the purchase book controlling accounts the addition of special columns in books of original entry makes possible the keeping of controlling accounts the most common examples of such accounts are accounts receivable account and accounts payable account these summary accounts respectively displace individual customers and creditors accounts in the ledger the customers accounts are then segregated in another book called the sales ledger or customers ledger while the creditors accounts are kept in the purchase or creditors ledger the original ledger now much reduced in size is called the general ledger the trial balance now refers to the accounts in the general ledger it is evident that the task of taking a trial balance is greatly simplified because so many fewer accounts are involved a schedule of accounts receivable is then prepared consisting of the balances found in the sales ledger and its total must agree with the balance

of the accounts receivable account shown in the trial balance a similar schedule of accounts payable made up of all the balances in the purchase ledger is prepared and it must agree with the balance of the accounts payable account of the general ledger the balance sheet in the more elementary part of the text the student learned how to prepare a statement of assets and liabilities for the purpose of disclosing the net capital of an enterprise in the present chapter he was shown how to prepare a similar statement the balance sheet for all practical

The Book of Hall Marks, Or, Manual of Reference for the Gold and Silversmith 1872. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book without typos from the publisher. Not indexed, not illustrated. 1905 edition. Excerpt height about 4 5 cent transactions of the American Institute of Mining Engineers, October 1898. Mr. Chism claims as original the use of silver for receiving mercury, though this was suggested before and the use of a separate vessel to cool the receiving surface by contact. See fig. 39, a base of retort stand, b, spirit lamp, g, retort or annealing cup, d, d, retort stand ring, which serves as support to the apparatus. e, e, tin shields, f, f, silver foil for receiving the mercury, o, cooling cup. Tinieters: the mouth of the crucible should have an even surface shield to prevent the direct heating of

the upper part of the crucible and silver foil use a circular tin shield about 13 centimeters in diameter with a hole in the center large enough to pass the crucible partly through leaving about 1 centimeter of the crucible above the shield the recipient use a piece of pure silverfoil rolled silver about 5 centimeters square and about 0.02 millimeters in thickness on which to receive the mercury it should be large enough to cover the crucible and leave a margin all round of about one half centimeter cooling aid for cooling the silver foil use a silver dish of a wide pattern like an evaporating dish silver is a good heat conductor a copper dish could be used the bottom of the dish should be a little larger than the mouth of the crucible keep the bottom of the dish polished to enable you to discover any mercury that might soak through the silver foil should this happen drive off the mercury from the dish by heat and repeat the assay with new silver foil and less ore flux use iron filings the finer the better they should pass a 60 mesh sieve

Manual of Assaying Gold, Silver, Copper and Lead Ores 1883 excerpt from manual of assaying gold silver lead copper when i entered upon the task of preparing this book it was with the idea of furnishing a guide to those who having had no previous technical or especially scientific education desired to learn something of the practical assaying of gold and silver ores and in whose hands i could place no work that could give them this information in a clear simple and thoroughly detailed manner and unburdened with unnecessary matter this intention i have tried to adhere to all the way through and while i have added other information which was

pertinent i have kept such increase in an appendix so that the body proper of the work contains the real subject matter it is my sincere belief that there is no book in the english language on the subject of assaying which occupies the space that this little manual tries to fill a number of such publications fail to meet the want on account of their antiquity they having been written some thirty years ago hence their methods apparatus etc are not suited to the assayers of to day others are either more suitable as books of reference or do not give sufficient detail for the inexperienced it is this latter fault i have carefully endeavored to avoid and perhaps have gone to the other extreme at all events i have tried to give here in print the precise instruction which i have previously imparted orally to my students those who may choose to criticise will remember for whom this handbook is written while i have consulted many of the authorities listed on pages 268 274 it is from three in particular that i have drawn great
